

RK DRIVE CHAIN

A History of Commitment

- RK Racing Chains have been the dominating factor for more FIM World Championship teams and AMA World Superbike/Super Sport Teams than any other chain in the past 20 years! That's why top riders such as Yoshimura's AMA Superbike Champion Matt Mladin, Repsol Honda's World Champion 500cc Grand Prix rider Alex Criville and "heir apparent", Valentino Rossi, plus many other top teams, all rely on RK Chains to drive them to victory lane.
- RK Racing Chains can withstand the extreme conditions associated with racing better than any other chain on the market. RK Chains are pre-stressed and pre-stretched for maximum performance and long life.
- Championship riders know that RK Chains can handle the extreme demands of motorcycle racing. On road or off, RK Chains are the winner's choice for long lasting, high performance racing chain.

RK Chain 20,000 Mile O'Ring Chain Warranty

- **Your original purchase of RK O'Ring chain is warranted to be free of defects in material and workmanship for 20,000 miles of street riding, or one year of off-road use.**

There is absolutely no warranty of any kind, implied or otherwise, for any RK chain used in any racing competition.

RK Standard Chain

For light duty application on motorcycles up to 350 cc that did not come equipped with an O-ring or Heavy Duty chain as original equipment.

RK Heavy Duty Chain

Suitable for works type motocross applications and other applications that do not require an O-ring chain. Should not be used on motorcycles which come with stock O-ring chain.

"O"-Ring
Cut-Away

Non "O" Ring vs Basic O'Ring

- A properly lubricated, Heavy Duty racing non-O'Ring chain will perform efficiently as long as there is a "lubricating oil boundary layer" between critical bearing surfaces. However, once the boundary layer dissipates from high speed running, lack of maintenance, or simply over time, the inner bearing surfaces will overheat, kink, cause severe drag, and ultimately fail. RK O'Ring chains prevent this from happening by continuously lubricating and protecting critical internal bearing surfaces.
- The standard RK O'Ring has a flat contact patch that holds the lubrication in place. The result is a smooth transfer of power - quietly, safely and efficiently - with absolutely no O'Ring drag, plus the benefit of three times the wear life of a standard non O'Ring chain.

REMEMBER: *If your motorcycle came from the factory with an O'Ring chain, it should always be replaced with an O'Ring chain.*

"RX"-Ring
Cut-Away

"RX" - Ring Design and Features

- RK's "RX-ring" chains feature an X-ring shaped seal. Viewed in cross-section, the "X-ring" has two lubrication pools and seal points versus the single seal point/pool design of a regular o-ring chain. "RX-ring" technology offers less torsional friction, increased high-stress performance, and a 30% longer wear life compared to standard o-ring chains. RK's new "RX-ring" chains offer tremendous value, plus true quality and performance for all but the most demanding high performance applications.

"RX"-R
Cut-Away

"XW"-Ring
Cut-Away

"XW"-Ring Design and Features

- The leading edge "XW"-Ring is the ultimate high speed, extreme heat performance chain. The XW-Ring is made of an advanced Nitrile Butadiene composite and is equipped with three contact lips and two convex outer stabilizers. This means three lubrication pools to protect against high speed abrasion, extreme heat build up, torsional flex and the loss of lubricant under these extreme conditions. The Nitrile Butadiene composite is oil and contaminant resistant, and the "XW" design is compression and distortion resistant to provide the ultimate in efficiency and performance.
- The XW-Ring goes the distance to fully eliminate the risk of seal failure and provides the user with a 50% longer wear life than the basic O'Ring chain; plus a 20% increase over other competitive "X"-Ring type chains.
