MAIN JET

K&N develops its' main jets to correctly serve two functions; Static load and Dynamic load. The static load is the fuel recieved through the main jet in the upper gears, where the tachometer is moving very slow. The dynamic fueling portion of the main jet is the amount of fuel recieved in the mid-range portion of the power. For example, you have a GSXR1100 G with #130 main jets. You install #125 mains. After running the bike you notice the top end has improved but the mid-range doesn't pull as well. You then install #135 and you can tell the mid-range is great but the top end is slower. This is a common compromise when using the stock main jets and needles. When you install K&N #130 mains, you will get the good mid-range power of the #135 and the good top end of the #125. This is because the K&N main has a venturi design more consistent to the engine's needs.

MAIN AIR JET

This jet allows air into the emulsion tube to mix with fuel being drawn up from the float bowl. It controls the amount of fuel which can be pulled from the float bowl into the venturi. The larger the size of the main air jet, the more air you get and the less fuel. The smaller the main air jet, the more fuel you get and the less air. K&N alters this only to achieve the flattest possible fuel delivery curve.

NEEDLE JET (Emulsion Tube)/Needle Cap

Many newer bikes have very flat power and fuel delivery curves when used with stock exhaust and air-box. When aftermarket pipes are used, the power curve is usually not flat. You usually need to lean out for low speed and richen up for top end, or leaner on the top end and richer at low speed. In order to achieve full function and drivability, K&N uses shrouds or cap style nozzles for adjusting the upper or lower top end. These also have an effect similar to fuel injection by breaking up the fuel as it enters the air-stream.

FUEL NEEDLE

The design of the needle is where most of the R&D time is spent. The needle is designed to give the correct amount of fuel throughout the mid-range and is also designed to allow adjustments from groove 1 to groove 6 with little or no effect below 3000 rpm. With the correct end dimensions, the needle will have little effect on the main jet regardless of needle position. This isolates all circuits from each other and ensures easy set-up of the mid-range and drivability.

PILOT CIRCUIT

This controls 100% of the engine idle and 25% of the transition onto the needle. K&N has found that the engine will idle with the standard pilot jet, with or without the air-box and with the slides and needles removed from the carburetors, therefore K&N rarely changes the pilot jet. Changing the pilot jet is proof that you are not using the other circuits correctly. Idle and off idle is controlled by the mixture screws and the float level which has the most positive effect below 4000 rpm. On some models the pilot air jet is changed to provide optimum fuel economy. Correct balancing of the carburetors also ensures a smooth idle.

MOTORCYCLE POWER KITS

Intended for motorcycles with a stock or mildly tuned engine using a well designed aftermarket pipe with a modified air box and a K&N stock replacement air filter. These kits are designed for applications where individual air filters cannot be installed and for applications where air box modification improves the engine's performance. In most cases power increases of approximately 8% can be achieved. Kits include: recalibration jet kit and instructions, K&N Filter Charger Air Filter and K&N Re Charger Service Kit.

ATV POWER KITS

The K&N ATV Power Kits are a premier combination of a carburetor recalibration kit, K&N Filter charger air filter, K&N Pre Charger pre-filter and a K&N Recharger service kit. Designed to fit the most popular ATV vehicles, the ATV Power Kits incorporate the latest technology in carburetor jet kit art, delivering a superior level of performance found only in expensive racing ATV's. Each ATV Power Kit will deliver an average of 15% increase in horsepower, improve throttle response while still maintaining optimum fuel economy.

Each ATV Power Kit contains:

- Complete recalibration jet kit, including jets, needle, spring, shims and detailed instructions
- K&N Filter Charger air filter
- K&N Pre Charger pre filter
- K&N Re Charger service kit.

MX X-STREAM FILTER

A restrictive or dirty air filter inside your air can can choke off critical airflow, keeping your engine from realizing its full horsepower potential. The MX XStream air Filter adds a new dimension to K&N Filters and feeds your engine all the clean air it can use. The result is maximum horsepower and peak performance

- Two piece design: proven washable/reusable air filter technology integrated into a 2 piece. High-flow air filter allows an easy installation and cleaning process.
- Larger surface area: pleated cotton filter offers up to 2-3 times more surface area than a foam filter.
- Higher Filtration: 4 layers of woven, surgical grade cotton media provides optimum filtration.
- Perfect Seal: filter's sealing bead is designed for an airtight fit into air box
- Straightened Airflow: epoxy-coated aluminum air mesh incorporated into a backfire screen protects the filter element & assists to straighten airflow.
- Pre-Oiled
- FOR AIR FILTER APPLICATIONS see pages 123 thru to

ATV X-TREAM POWERLIDS

The ATV XStream Powerlid incorporates a K&N High-Flow-Air Filter with an air box lid that is designed to replace potentially restrictive stock air box lids and intake snorkels. Each XStream Powerlid includes a K&N DryCharger and the necessary carburetor jets to properly tune your ATV. For maximum airflow and filtration, use the Powerlid with a K&N OE replacement air filter.

- FOR ATV FILTER and POWERLID APPLICATIONS see pages 147 thru to 156

K&N Pre Charger

- Specially designed filter wrap made to extend the service interval of your K&N Filter Charger when used in very dusty conditions.
- Made from durable polyester material containing uniform micron openings
- FOR K&N PRE-CHARGER APPLICATIONS see pages 123 thru to 156

Pre-Charger

Dry-Charger

K&N Drycharger

- Specifically designed to prevent splashes of water or mud from saturating your K & N Air Filter. Dry Chargers are water repellent NOT waterproof.
- Made from a durable polyester material that is pre-treated with a proprietary hydrophobic process.
- FOR K&N DRY-CHARGER APPLICATIONS see pages 123 thru to 156

K & N UNIVERSAL AIR FILTERS - ROUND STRAIGHT

Round Straight

K&N Universal Round Straight Air Filters

When selecting one of K&N's universal round straight air filters, you should consider the following dimensions as they relate to the specification chart:

(F) Mounting Flange Inside Diameter — This is the most critical dimension and should be very close to the diameter of the application's inlet flange. The flange will stretch up to $\frac{1}{8}''$ for those in-between sizes.

(D) Filter Diameter — This is the overall diameter of the filter. Always use the largest diameter practical to insure maximum filtration.

(L) Filter Length — This dimension is the length of the filter body only, it does not include the flange length. Always use the longest filter practical for maximum filtration.

(FA/FL) Flange Angle and/or Length — If no angle is listed in the specifications table, the flange is straight. Any angle listed is in degrees and can be utilized when space is a problem.

K & N UNIVERSAL AIR FILTERS - ROUND TAPERED (CONE)

K&N Universal Round Tapered Air Filters

When selecting one of K&N's universal round tapered air filters, you should consider the following dimensions as they relate to the specification chart:

(F) Mounting Flange Inside Diameter — This is the most critical dimension and should be very close to the diameter of the application's inlet flange. The flange will stretch up to 1/16" for those in-between sizes.

(D) Filter Diameter — This is the outside diameter of the filter. The top size is listed first, then the base size. Always use the largest size filter that is practical for the application.

(L) Filter Length — This dimension is the vertical length of the filter body only, it does not include the length of the flange, nor does it take into account the taper of the filter media. Always use the longest filter practical, for maximum filtration.

(FA / FL) Flange Angle and/or Length — If no angle is listed in the specifications table, the flange is straight. Any angle listed is in degrees and can be utilized when space is a problem.

K&N Universal Dual Flange Oval Air Filters

When selecting one of K&N's universal dual flange oval air filters, you should consider the following dimensions as they relate to the specification chart:

(F) Mounting Flange Inside Diameter — This is the most critical dimension and should be very close to the diameter of the application's inlet flanges. The flanges will stretch up to 1/16" for those in-between sizes.

(MA / SA) Filter Oval Dimensions — This is the length and width of the filter. Always use the largest filter practical to fit the application.

(L) Filter Length — This dimension is the length of the filter body only, it does not include the flange length. Always use the longest filter practical, for maximum filtration.

(FA / FL) Flange Angle and/or Length — If no angle is listed in the specifications table, the flange is straight. Any angle listed is in degrees and can be utilized when space is a problem.

Flange Type — The location of the flangeS in relation to the outside of the filter is sometimes offset to one edge of the filter for more clearance.

(C-C) Flange Center to Center — For dual flange filters, this is the flange spacing. This dimension should be within 2mm for proper fit on the application.

K&N CRANKCASE VENT FILTERS

Steel Base

Steel base crankcase vent filters have vent tubes added to their base. Filters consist of a one piece design with a rubber or chrome top. Filters with mounting studs can be mounted remotely, but require vent hoses and clamps. Filter mounted direct can be pressed into rubber grommets in valve covers. All base plates are chrome plated. Tubes are zinc.

Uni Filter Wraps

- Uni foam filter wraps are designed to fit tightly over your gauze or foam filter element. When OILED, the filter wrap will stop all dirt and sand and provides excellent protection against water and mud. When used DRY, the filter wrap is an excellent pre-filter that prevents dirt build up and extends the life of your original filter. Uni filter wraps will not restrict air flow and can be easily washed.

TDR "HYPER TENSION" REEDS

- TDR "HYPER TENSION" reeds are made of the highest quality material available. This material is custom designed by TDR to give the best possible performance and have a long working lifespan.
- TDR "HYPER TENSION" reeds use a tension reducing spacer to reduce the bending resistance of the reed petal. This spacer allows the reed to open quicker. The quick response action of the reed allows the fuel-air mixture to enter the engine faster. With this faster intake action, there is an increase in throttle response and low speed performance.

FMF REEDS & RAM VALVES

Torque Reeds

FMF Racing's renowned Torque Reeds have built their success on one simple detail: Dual Action Reed Design. Better throttle response with improved bottom and mid range performance can be felt via improved air velocity and dual reed tension. With this dual action reed, the primary reed has a lighter tension for quicker throttle reaction. Pair this with a tensioned strip to stop reed flutter and the FMF Torque Reeds deliver crisp throttle action and plenty of power.

MOTION PRO TOOLS

Synch Pro Carb Tuner

- Precise four channel vacuum indicator designed specifically for intake synchronization of engines with multiple carburetors or throttle bodies (max vacuum range 40cm Hg)
- Mew mercury-free design uses non toxic manometer fluid
- For use with any 2,3 or 4 cylindre four stroke motorcycles
- Spill proof design means the tool can be stored in a horizontal or verical position
- Easy to read scale for precise synchronization
- Unaffected by barometric pressure changes
- Includes hang hook to clip onto the handlebars for easy use
- Rugged, impact resistant ABS enclosure with convenient storage area for adapters
- Rubber feet on enclosure bottom helps prevent sliding
- Includes manometer fluid, hoses, 5mm adapters, in-line restrictors and instructions
- 5mm adapters are used on many Honda and Suzuki models
- Optional 6mm adapters are available for use on most Yamaha models

Pilot Screw Adjusting Tool

722-8119

- Motion Pro's new Pilot Screw Adjusting Tool was designed to fit into those tight areas on most multi-cylinder motorcycle.
- This unit features a 1" angled head for those hard to reach pilot screws.
- Length is approximately 17" with a flat slot blade tip.

Ignition System Tester

722-8122

- This new Ignition System Spark Tester is designed to test the integrity and strength of your ignition system.
- The larger the gap your ignition will jump, the stronger your system is.
- This unit will test the spark on most motorcycle, watercraft, ATV and snowmobiles.
- The spark gap is adjustable from 0 to 10 mm.

MIKUNI TOOLS

Mini Pocket Tuner

560-MK550

- Mikuni has developed this handy slide calculator which can be used to determine the required jetting changes due to changes in altitude and/or ambient temperature.
- For both 2- & 4- stroke engines.
- Also has a guide for determining rich or lean carburetor conditions.

Mikuni Jet Wrench

560-403-2

- Original Mikuni jet wrench for all 6 mm hex jets.

Mikuni Tool Kit

560-404

- The Mikuni Tool Kit has all the tools needed to work on all Mikuni carburetors.
- Comes with carrying case which makes it indispensable for on sight adjustments.

Main Jet Carrier

- Stores 22 main jets in a molded neoprene rubber carrier (jet removal tool included).
- Mikuni carrier comes with jet removal tool (Can be ordered separately Part#560-1876)
