Polaris RMK Steering Racks

757-1252

\$174.95-F

- Classic 1997 to 1999
- Mountain Machines Performance machines their steering rack from solid 60-61 aluminum and with bearings NOT bushings. With a tight smooth feel and a trick look of machined out aluminum producing a total weight of 14oz. You are strong & light in your fight to the finish line, uphill racing or sled shredding!

Why should I change my stock steering rack?

- Stock steering racks have been known as the "weak link" for quite some time now. Made out of hollow bar stock and equipped with bushings, you just end up with too much slop in your steering. Until now! Our racks offer bearings which eliminates the sloppiness.
